Suitability of Non-Vacant Sites	F-22
Moderate-Income Household Affordability Assumptions	F-42

Precedent Projects and Capacity Projections

In total, 41 percent of the sites included on the housing sites inventory in Appendix A are non-vacant, meaning they contain buildings or other significant improvements that are permanent and add significantly to the value of the property. Per State law, if the inventory identifies non-vacant sites to address a portion of the regional housing need allocation, analysis is required to demonstrate the viability of sites for redevelopment with housing during the planning period. Accordingly, a survey of recent residential development projects in Turlock and surrounding communities was conducted to establish typical site characteristics for multifamily developments and average as-built densities that can be applied to determine the realistic capacity of sites included in the inventory. The characteristics of sites on the Turlock inventory were also compared to those of the representative multifamily projects to confirm that they are conducive to redevelopment. The survey considered recent residential development projects on comparable sites in Stanislaus Region including Modesto, Merced, Patterson, Oakdale, as well as recent developments within Turlock. Profiles of the recent residential precedents are included below, detailing project location, site characteristics prior to redevelopment, and approved/constructed densities.

Table F-1 summarizes the pertinent characteristics of precedent high-density projects surveyed, including project name, location, site size, zoning, number of units, as built density, affordability and construction status. The representative multifamily projects typically have the following characteristics:

- **Density:** The density of the precedent projects ranges from 19 to 33 du/ac along commercial corridors, averaging at 26 du/ac. Projects located within downtowns had densities ranging from 23 to 40.6 du/ac, averaging at 31.8 du/ac.
- **Building Heights:** The building heights of all the precedent projects were 2 or 3 stories, ranging from 28 to 40 feet in height, averaging 33.4 feet.
- **Parking:** The projects had a variety in parking ratios, ranging from 0.67 to 1.92 per unit. Projects along commercial corridors had a higher average of 1.52 parking spots per unit, compared to 1.24 per unit for projects located within downtowns.

Project Density: 23 du/ac

*For Phase I: 8 apartments for those who have completed assistance and training program by DST at or 30 percent AMI, 15 apartments for those earning at or below 50 percent AMI, and 53 apartments for those making 80 percent AMI.

For Phase II: 7 apartments for those who have completed assistance and training program by DST at or 30 percent AMI and 64 apartments for those earning at or below 60 percent AMI

Site Plan

Project Description: Archway Commons II is the final phase in a 150 unit combined, two phase projects. The 3.17 acre project site is located along Modesto's western edge and northwest of downtown Modesto. Phase II consists of nine, two-story wood framed buildings consistent with the Phase I design and includes 1-BR/1-BA , 2-BR/1-BA, and 3-BR/2-BA apartments with full kitchen for all units. All ground level units are ADA compliant.

Onsite Amenities: Community center includes a swimming pool, outdoor picnic area, basketball court, common room, computer learning center, management office with reception area, restrooms, maintenance room, two tot lots, courtyard open spaces, initially constructed in Phase I. Gated pedestrian and vehicle access to the property at Carver Road and 9th Street Is shared with the Phase I development.

Suitability of Non-Vacant Sites

The inventory identifies 98 non-vacant sites and 228 vacant sites to accommodate lower, moderate, and above moderate RHNA. Profiles of 12 representative non-vacant sites from each of the opportunity areas are provided below, showing aerial views of the sites, photos of existing development, and pertinent site characteristics indicating redevelopment potential. **Table F-2** presents indicators of redevelopment viability for all 98 individual sites, including age of existing structures; AV ratios; existing versus allowable floor area; and proposed zoning.

While the age of existing structures is not available for all sites, available data indicates that the average age of the existing buildings is 62, with 66 percent of the sites have structures more than 50 years old and almost 80 percent are older than 40 years old. Additionally, the data show that existing development represents only a fraction of development permitted under current land use and zoning - 64 percent of the sites currently use less than 30 percent of the typical floor area, and all the sites averaging at using 27 percent of the maximum allowable floor area. Existing structures on sites within the North Golden State. Geer Road, and West Main opportunity areas tended to use a higher percentage of the allowable FAR. In comparison, the precedent projects (**Table F-1**) had existing buildings that were approximately 20 to 65 years old prior to being redeveloped. The FAR prior to redevelopment of the precedent projects was also comparable to non-vacant sites in the inventory – less than a quarter of the allowed FAR. As such, the non-vacant sites have similar characteristics to those of the precedent sites prior to development, thus confirming the potential for redevelopment.

The methodology for capacity calculations described in Chapter 3 conservatively assumes that all existing non-residential square footage will remain as housing is added to the sites, even though the workforce housing overlay allows for 100 percent residential developments. In other words, the capacity assumptions assume that all non-vacant sites will develop in a mixed-use format and as such account for the possibility of non-residential development. Further, Chapter 4 Housing Action Plan, includes programs intended to facilitate and incentivize housing development on sites within the workforce housing overlay. Program 1-B, Workforce Housing Overlay, would adopt Zoning Code amendments in the form of a Workforce Housing Overlay District, which would permit multifamily housing development at between 20 and 35 dwelling units per acre. Program 1-F, Congregational Overlay, would facilitate production of affordable housing projects on properties owned by religious institutions by adopting a Congregational Overlay and associated development standards that permit residential development at up to 24 dwelling units per acre by-right. Therefore, in view of the foregoing factors and given that the capacity of the inventory exceeds the City RHNA allocation, there is sufficient buffer to ensure the City can meet its RHNA obligations in the event some parcels develop with 100 percent non-residential uses over the planning period.

Table F-3 summarizes zoning standards applicable to precedent high density projects in Turlock and surrounding communities. Several precedent projects had Planned Development (PD) zoning where project-specific standards were established through the development approval process. The workforce housing overlay has not yet been developed, so the specific standards for building height, lot coverage, setbacks and other parameters are not available for comparison, but the maximum permitted density in the overlay is higher than for precedent projects in Patterson and Oakdale and higher than the as built density of all precedent projects. Further, the overlay would permit residential development by right, and as such overall it standards are at least as supportive of multifamily residential development as those of the precedent projects.

Turlock			Downtown Core (DC)	40 du/ac	60'	Off-street parking not required in the Downtown Core Overlay Zone	0' front; 0' side; 0' rear; 0' side (corner lot)	-

Notes

1 For all residential uses, twenty-eight (28) dwelling units shall be the maximum allowed per net subdivision acre, unless a density bonus is allowed for low or moderate income housing, and/or senior citizen housing.

² Twenty-five (25) feet for accessory buildings.

² For existing substandard lots (legal nonconforming) of four thousand (4,000) square feet or less, off street parking requirements shall be two (2) poved spaces, one of which must be covered.

⁴ 12 feet (1 story) for accessory structures.

 $^{^{\}rm 5}$ One additional guest parking space for each 3 units.

⁶ P-D zoning allows for a case-by-case basis use of special design criteria for maximum utility of the site and maximum design flexibility within density limitations.

Moderate Income Household Affordability Assumptions

Housing affordability can be estimated by comparing the cost of renting or owning a home in Turlock with the maximum affordable housing costs to households at different income levels. In evaluating affordability, the maximum affordable price refers to the amount not exceeding 30 percent of household income for households in the upper range of their respective income category. Households in the lower end of each category can afford less in comparison. The maximum affordable home and rental prices for residents of Turlock are shown in Table F-4, which also shows household and unit size. The affordability of the city's housing stock by tenure and income group is discussed below.

Moderate Income households are those making between 81 and 120 percent of the area median income. Specifically, for Stanislaus County, a 2-person (1 bedroom) household in Turlock ranges from \$54,000 to \$88,900 annually. Based on HCD income limits and affordable housing cost estimates shown on Table F-4, the affordable monthly rent for a 2-person (1 bedroom) household in this income category ranges from \$1,350 to \$2,223 per month and the affordable house price is up to \$263,930. For a 3-person household (2 bedroom) in Turlock, moderate income households range \$60,750 to \$100,000 annually. The affordable monthly rent for a 3-person (2 bedroom) household in this income category ranges from \$1,519 to \$2,500 per month and the affordable house price is up to \$295,608. For a 4-person (3 bedroom) household in Turlock, moderate income households ranges from \$67,500 to \$111,100 annually. The affordable monthly rent for a 4-person (3 bedroom) household in this income category ranges from \$1,688 to \$2,778 per month and the affordable house price is up to \$327,287. When comparing the affordable monthly rent of Table F-4 to the average asking rent prices in Turlock of Table F-5, the results indicate that rental units of appropriate size, up to 3-bedrooms, would be available in a range affordable to 2- to 4-person households in the Moderate income category. However, when comparing the affordable for-sale house prices of Table F-4 to the median sale prices of Table F-6, it is clear that for sale product would not likely be within reach for any Moderate-Income households. For example, the affordable purchase price of a studio for a Moderate-Income household would be \$227,555, which is about \$50,000 lower than the median sales price of \$278,333. As such, all for sale products in the inventory are counted toward Above Moderate Income.

Further, a review of housing built in Turlock since 2010 can be found in Table F-7. This table indicates that the vast majority of multifamily housing built in Turlock since 2010 and during the City's 2015-2023 5th Cycle Housing Element were rental product. From 2010 to 2022, there has been an increase of 1,638 of multifamily units, of which 99.2 percent were rental product. Further, during the 2015-2023 Housing Element Cycle, the City of Turlock saw more housing approved or constructed than any other city in Stanislaus County except Modesto, as shown in Chapter 2 Community Profile Table 2-4. Therefore, for the purpose of realistic projections, the inventory conservatively assumes that on sites zoned for higher density housing that are too small to meet the lower income suitability criteria, on average 70 percent of the units will be affordable to Moderate Income households and 30 percent will be affordable to Above Moderate-income households.

I. AMI limits based on 2023 HCD State Income Limits for Stanislaus County, other assumptions are derived from Zillow estimates (as of January 2022) and the National Association of Realtors. The 2023 Stanislaus County AMI is \$92,600

Source: HCD State Income Limits, 2023; Stanislaus Housing Authority Utility Allowance Schedule, 2022; Zillow Mortgage Rates, January 2022; National Association of Realtors Research Group, Downpayment Expectations & Hurdles to Homeownership, April 2020; Dyett & Bhatia, 2022

^{2.} Affordable monthly payment for renters and owners is assumed to be one-twelfth of 30% of median income applicable for the number of bedrooms. The exception is moderate-income owners, whose affordable payment is assumed to be is one-twelfth of 35% of median income applicable for the number of bedrooms as specified by HCD, pursuant to HSC 50052.5(b)(4).

³ Utilities are estimated according to the 2021 Stanislaus County Housing Authority Utility Allowance Schedule. Estimates are based on the combined average cost of gas and electric heating, cooking and water heating, as well as other electric, water, trash collection, sewer, air conditioning, refrigeration, and range/microwave across all unit types [i.e., elevator/high-rise/apartment/walk-up (multi-family), detached house/single family dwelling, mobile/manufactured home, row house/townhouse & semi-detached/duplex]. Costs are assumed equivalent for owners and renters.

^{4.} Taxes and insurance are assumed to be 35% of monthly affordable housing costs for owners.

^{5.} Assumed 30-year amortization, 5.84% interest rate, 6.0% down payment and closing costs equal to 2% of the sale price.
